

We've Gone Commercial

Long gone are the days when employees conformed to the design of a building. In today's commercial market, employees are driving design. Most companies have now recognized the direct link between how their building is configured — both inside and out — and how their employees perform.

That's why JSA zeros in on the almighty "P" when taking on commercial ventures — productivity. Whether we're designing a corporate headquarters or renovating the floor plan of an existing building, we're able to build relationships with our clients by providing design solutions that create productive work environments; environments that help companies retain and attract the best and brightest; environments that lead to increased profitability.

One of the ways we do this is through sustainable design. Although that phrase gets tossed around a lot today, often mistakenly, it refers to incorporating some design fundamentals to take advantage of natural resources — something JSA was doing long before the phrase came into vogue. For example, we'll study the position and movement of the sun to get the most out of natural lighting, examine wind paths to capitalize on natural ventilation, and research vegetation for shading. Our project teams explore all options to create productive, profitable working environments that extend throughout the life of your building.

Speed is also becoming increasingly important in commercial design. Clients make decisions fast and expect results faster — and at the best possible value. To accommodate, JSA follows a series of customized standards we created to increase our own efficiency, formalized procedures that enable us to deliver results in less time. We also use an innovative software program that speeds up the design process considerably while allowing us to create exceptional designs. So we're able to deliver what you need, when you need it, and within your budget. Because we're a single-source firm — we offer architecture, planning, engineering and interior designer services in-house — we're capable of handling any project, from assessing your electrical engineering system to designing or renovating an entire building.

Much like our commercial projects, our teams are designed to be as productive as possible. While other firms outsource services, we know the value of having all disciplines collaborating under one roof each day on your project. This allows us to design faster, better, and provide greater return on your investment. Since JSA has successfully worked on so many different types of commercial projects, our teams understand the changing market and what you need to survive — solutions that improve employee productivity, and ultimately profits.

Our clients include Centimark, Development Dimensions International (DDI), Rockwell International, Hyperion, IBM Transarc, Fiserv, and Affiliated Computer Systems. ●
